

Directions

- 1** REMOVE THE PERFORATED TAB ON THE FRONT OF YOUR SHROOMBOX AND CUT A 2" X 2" CROSS INTO THE LOWER PORTION OF THE BAG ABOUT A HALF AN INCH DEEP, AS SHOWN IN THE DIAGRAM ABOVE.
- 2** CAREFULLY REMOVE YOUR KIT BY GENTLY SLIDING IT OUT OF THE BOX RATHER THAN LIFTING IT FROM THE TOP OF THE BAG, WHICH WILL BREAK THE NATURAL SEAL BETWEEN THE BAG AND THE COMPOST.
ALWAYS HANDLE YOUR KIT BY GRADLING IT FROM THE SIDES AND BOTTOM
- 3** FILL A LARGE BOWL WITH COLD WATER AND SOAK YOUR KIT OVERNIGHT, MAKING SURE THE NEWLY EXPOSED AREA IS COMPLETELY SUBMERGED IN WATER.
- 4** PLACE YOUR KIT BACK INTO THE BOX AND POSITION IT NEAR A WINDOW, AVOIDING DIRECT SUNLIGHT.
KEEP AWAY FROM HEATERS AND AIR CONDITIONERS
- 5** MIST THE EXPOSED AREA ON YOUR KIT TWICE A DAY, ENSURING THE SURFACE REMAINS MOIST.
- 6** YOU SHOULD SEE BABY MUSHROOMS START TO FORM WITHIN 4-10 DAYS. HARVEST YOUR MUSHROOMS AS THE CAPS BEGIN TO CURL UPWARDS, OR IF YOU NOTICE THEM DRYING OUT.

AFTER HARVESTING, THE CONTENTS OF YOUR KIT MAKE A GREAT FERTILIZER FOR THE GARDEN
